Le Bleu Central Expands & Opens 5-Gallon Bottling Line in Fayetteville, NC

Le Bleu Central proudly held a Grand Opening and Ribbon Cutting Ceremony on Friday, April 13 to celebrate the expansion of its distribution facility in the Cumberland Industrial Center (CIC). The company's over \$1.2 million investment in this project will expand its operations to include distillation and bottling.

Elected officials and local business leadership were on hand to show their support of this development and assist Brock Agee, the President & CEO of Le Bleu Central Distributors, with the Ribbon Cutting.

"This is a big moment for us," said Agee. "We had a vision of opening a bottling line from the day we purchased Le Bleu Central, and that day is finally here. This project will ensure that water will never be trucked more than 100 miles to our customers." Agee noted that a local bottling plant is friendlier on both the environment and freight cost.

Le Bleu Central's expansion includes the purchase of a fractional vapor compression distiller and other components to bottle water in 3 and 5 gallon sizes. "The community fought to bring this new bottling operation to the area and worked professionally and diligently to support our business plan," said Agee. "The overwhelming support we received allowed us to quickly move forward with this project and increase our ability to provide Ultra-Pure bottled water to the families and businesses of this area."

"This is a wonderful day in Cumberland County as we celebrate an existing industry that has chosen to expand operations and increase investment in our community," said Larry Lancaster, Chairman of the Cumberland County Board of Commissioners.

Andrew Pennink, the Chairman of the FCEDC Board of Directors said, "We are excited to see this company invest in our community and look forward to their continued success."

WHAT IS THE LE BLEU DIFFERENCE?

Recommended by doctors and nutritionists worldwide, Le Bleu's taste is so great and it's purity so refined, it would be inconceivable to add back inorganic mineral salts we work so hard to remove.

First in the world to develop the ULTIMATE purification process, including Fractional Vapor Compression Distillation, Le Bleu produces the purest and best tasting water in the world.

11% Hydrogen & 89% Oxygen - PURE WATER!

Here's how steam distillation works: Water is heated in a chamber and turned into vapor (steam). This water vapor rises leaving impurities behind in the boiling chamber. The purified vapor then enters a condenser, where it is cooled and returned to the liquid state.

Distillation kills harmful bacteria and viruses, removes virtually all foreign particles, inorganic minerals, heavy metals, chlorine, and volatile organic chemicals (VOCs).

Research your thirst. Compare Le Bleu's taste and purity with any bottled water and you make the choice.

TASTE THE DIFFERENCE!

Slim Down...

Lemon juice naturally speeds up the metabolism, causing an instant energy jolt to the body. The citrus flavor provides the bolt of alertness and focus for you to take on your day!

Detox...

Lemons naturally contain acidic qualities that help eliminate harmful bacteria and help the liver flush toxins out of the body.

Absorb...

Drinking lemon water gives you extra vitamin C—plus potassium, magnesium, and copper—and helps you absorb more nutrients like iron and calcium from the other foods you eat.

Why Drink Lemon Water Everyday?

Boost...

Lemons contain high amounts of vitamin C, which can protect the body of harmful illnesses. Vitamin C helps produce white blood cells, protecting your immune system.

Hydrate...

Start your day with lemon water and you will instantly feel refreshed, and your skin will glow due to the high antioxidant level found in lemon juice. Proper hydration is important to maintain bodily functions.
